AUTOPSY REPORT
KOZLUK GRAVE SITE

CASE NO: KK3 712B

AUTOPSY DATE: 17.08.99
MORTUARY: Visoko

SUMMARY:

A complete body, partly skeletonized, particularly on the right side of the trunk, but with greasy soft tissue elsewhere.

As established from anthropology data, the person was male, aged between 31 and 71 and measured from 159 to 174 cms in height. There were no particular identifying features.

He died from two gunshot injuries to the head, both bullets probably entering the top of the skull, one on either side, and exiting through the face. He had also been shot in the left lower leg, the core of a bullet being found in the soft tissues there, though without any associated bony injury. Presumably the bullet had passed through something or someone else beforehand. Conceivably it may have been from either of the shots to his head.

The only other injuries were fractured ribs on both sides of the chest, likely to have been post-mortem in nature from crushing or moving the body after death.

When found, he was still fully clothed. His hands were tied behind his back by a cloth ligature around his wrists.

CAUSE OF DEATH:

It is my determination that the cause of death in case number **KK3 712B** was:
Gunshot injuries to head

This formal report is based upon the autopsy report that I prepared at the time of my examination. Both reports truly and accurately reflect my findings.

Signed:.....

Dr. John Clark, MB ChB FRCPath Dip. FM
