the Former Yugoslavia

AUTOPSY REPORT

KOZLUK GRAVE SITE

CASE NO: KK3 893B

AUTOPSY DATE: 27.08.99

MORTUARY: Visoko

SUMMARY:

A complete and intact body with the skin and soft tissues still present over most of it.

The person was male, and as established from anthropology data was aged between 31 and 71 and measured from 166 to 182 cms in height. Apart from having a stubbly beard at the time of his death there were no particular identifying features.

The only injuries found were what appeared to be post mortem fractures of the skull – the front part and the face – and of the ribs on both sides of the chest, probably the result of crushing or moving the body after death.

There were no obvious gunshot injuries and no bullet fragments found. The cause of death in this person, therefore, from this examination, remains unascertained.

The only other significant finding was that when found, his hands were tied together behind his back by a ligature around the wrists.

CAUSE OF DEATH:

It is my determination that the cause of death in case number **KK3 893B** was:
Unascertained

This formal report is based upon the autopsy report that I prepared at the time of my examination. Both reports truly and accurately reflect my findings.

Signed:.....*John Clark*.....

Dr. John Clark, MB ChB FRCPATH Dip. FM
