the Former Yugoslavia

**AUTOPSY REPORT**  
KOZLUK GRAVE SITE

**CASE NO: KK2 114B**

**AUTOPSY DATE: 29.07.99**  
**MORTUARY: Visoko**

**SUMMARY:**

This was a moderately well preserved and intact body of an adult male. Anthropological data would suggest that he was aged between 20 and 60 years.

He had been shot a number of times in the trunk and right leg. One bullet was recovered from the chest while another had penetrated the abdominal cavity from where it was retrieved at autopsy. A portion of bullet was also found adjacent to the pelvis. The right thighbone had also been shattered by the passage of a bullet through the leg.

The facial skeleton was badly fractured but it was not possible to determine if these injuries had been sustained before or after death.

**CAUSE OF DEATH:**

It is my determination that the cause of death in case number **KK2 114B** was:  
**Bullet wounds of trunk and right leg.**

This formal report is based upon the autopsy report that I prepared at the time of my examination. Both reports truly and accurately reflect my findings.

Signed:.....
