AUTOPSY REPORT

GLOGOVA GRAVE SITE

CASE NO: GL02 011BP General Body Parts

AUTOPSY DATE: 05.10.99
MORTUARY: Visoko

SUMMARY:

A large collection of bones from all parts of the body, from at least four individuals. There was no soft tissue surviving.

As established from anthropology examination, two of the individuals were adults while the other two were young persons, including one or more under the age of 17. Only with a few bones was it possible to say that the person was male: with the majority, it was not possible to say one way or the other. There were no other particular identifying features.

There were fractures of several of the bones present, with fragments missing. Some, such as fractures of a number of ribs and of part of a pelvis, were almost certainly caused after death from crushing of the body. With others, including fractures of a number of skulls and of several arm and leg bones, it was not possible to say what caused them or if they occurred before or after death.

In only one bone, one of the skulls, was there evidence of a definite gunshot injury, with a bullet entrance hole. In this individual, at least, it can be assumed that this was the cause of death.

CAUSE OF DEATH:

It is my determination that the cause of death in case number **GL02 011BP General Body Parts** was:

1. Gunshot injury of head
2. Unascertained

This formal report is based upon the autopsy report that I prepared at the time of my examination. Both reports truly and accurately reflect my findings.

Signed:.....

Dr John Clark MB ChB FRCPath Dip FM

Date: 05.10.99

A. GENERAL DESCRIPTION OF REMAINS:

A large assortment of bones from all parts of the body, from at least 4 individuals, two of them adults and two of them younger persons

B. CLOTHING:

None

OTHER ITEMS:

None

C. IDENTIFYING FEATURES:

Sex:

From examination of soft tissues: Not possible

From anthropology details: Skull (x 3) – male
Others – indeterminate

Age range (from anthropology data): Two – adult
Two - < 17

Build: Not possible

Height (cm):

From estimation of intact body: Not possible

From anthropology data: Not possible

Hair:

Head hair: Not possible

Facial hair: Not possible

Teeth:

General description: Not possible

Retained for dentist: No

Tattoos: Not possible

Scars: Not possible

Other features: None

D. BODY PARTS MISSING: See Anthropology Report

E. INJURIES:

- i. **Findings on fluoroscopy:**
None

Radiographer: Patricia Campbell

ii. **Main injuries described:**

Probably Probably Can't
ante-mortem post mortem tell

Head and neck:

- Skulls:
 - each of 4 skulls present is fractured, with substantial parts missing
 - one shows the edge of probable bullet entrance defect in the right parietal region with internal bevelling but most of rest of skull is missing

√
√

Trunk:

- Ribs – fractures of several ribs in various places
- Pelvis – fracture of the rami of a right pelvis

√
√

Limbs:

- Legs:
 - fractures of the upper end of a right femur and the head of a left femur
 - fractures of the mid-shaft of a right tibia, of the end of another, and of two fibulas

√
√

F. INTERNAL TISSUES:

None

H. SAMPLES AND ITEMS RETAINED:

SOCO: Ronnie Govender

Bullets/Shrapnel:

None

Anthropology:

None

DNA:

None

Other:

None
