AUTOPSY REPORT

GLOGOVA GRAVE SITE

CASE NO: GL02 058B

AUTOPSY DATE: 01.10.99
MORTUARY: Visoko

SUMMARY:

A large part of a body but missing the head, many of the bones of the chest, the right forearm, both hands and the left lower leg. There was a little dried tissue adherent to some of the bones but otherwise the remains were skeletonized.

From anthropology examination, the person was male, aged between 17 and 60, and measured from 169 to 185 cms in height. Apart from an unusual bony projection from the back of the right thigh bone, there were no other identifying features.

There was a bullet lodged in his right knee joint but without any associated fractures. It was therefore not a significant injury and may well have even ended up there after death. A fracture of the sacrum in the pelvis did appear to be a post mortem injury, from crushing or moving of the body.

There were no other findings and so, from this examination, it is not possible to determine the cause of death in this person.

CAUSE OF DEATH:

It is my determination that the cause of death in case number **GL02 058B** was:
Unascertained

This formal report is based upon the autopsy report that I prepared at the time of my examination. Both reports truly and accurately reflect my findings.

Signed:.....

Dr John Clark MB ChB FRCPath Dip FM

Date: 02.10.99

A. GENERAL DESCRIPTION OF REMAINS:

Substantial part of a body but missing the head, many of the bones of the thorax, and the left lower leg. Partly skeletonized but with dry ligamentous tissue adherent in some areas.
