AUTOPSY REPORT

GLOGOVA GRAVE SITE

CASE NO: GL03 002BP SURFACE

AUTOPSY DATE: 11.10.99
MORTUARY: Visoko

SUMMARY:

Much of the upper half of a body but minus the head, the right hand, some ribs and a few vertebrae from the spine. A lower jaw was present which may or may not have been from the same person and there was also a foot bone which almost certainly was from someone else. The remains were completely skeletonized, with no soft tissue remaining whatever.

As established from anthropology examination, the person was adult, aged over 22, but it was not possible to say whether male or female. If the lower jaw belonged to this person then he or she had obviously lost all of their teeth sometime in the past. Most likely the jaw did not belong to these remains.

Many of the bones were fractured – most of the ribs, several bones in the spine, both shoulder blades and the left upper arm – but most or all of this probably occurred after death, from crushing or simple erosion of the bones, given that the remains were near the surface.

The only possible genuine injury was a fracture of the left collar bone which may have been part of a gunshot wound, but it was not possible to confirm this one way or the other.

Apart from the fact that the person was wearing multiple layers of clothing there were no other findings. From this examination it is not possible to determine the cause of death.

CAUSE OF DEATH:

It is my determination that the cause of death in case number **GL03 002BP SURFACE** was:
Unascertained

This formal report is based upon the autopsy report that I prepared at the time of my examination. Both reports truly and accurately reflect my findings.

Signed:.....

Dr John Clark MB ChB FRCPath Dip FM

Date: 12.10.99

A. GENERAL DESCRIPTION OF REMAINS:

Upper trunk and arms of a body, in several layers of clothing, completely skeletonized

B. CLOTHING:

- Dark brown leather jacket, extensively torn
- Grey suit-type jacket
- Blue jacket
- Green crewneck jersey
- Purple jersey
- Dark green long-sleeved shirt
- Dark brown leather belt

OTHER ITEMS:

None

C. IDENTIFYING FEATURES:

No natural teeth in lower jaw – all lost (probable commingled item)

D. ANTHROPOLOGY DETAILS:

Sex: Indeterminate

Age range: Adult, >22

Stature (cm): Not possible

E. INJURIES:

i. **Findings on fluoroscopy:**

- Possible tiny metal fragments in remains

ii. **Main injuries described:**

	<u>Probably ante-mortem</u>	<u>Probably post mortem</u>	<u>Can't tell</u>
1. Right clavicle – fragmentation of middle third	√		
2. Ribs – multiple fractures of all ribs on both sides leaving numerous fragments		√	
3. Spine – post mortem erosion of several vertebrae and fractures of some, mainly thoracic		√	
4. Scapulae – fractures of blade of both		√	
5. Left humerus – fracture of head		√	

F. INTERNAL TISSUES:

None

H. SAMPLES:

DNA – right humerus
