AUTOPSY REPORT

GLOGOVA GRAVE SITE

CASE NO: GL05 017B

AUTOPSY DATE: 13.10.99
MORTUARY: Visoko

SUMMARY:

A more or less complete body apart from occasional bones from the chest and spine and the right hand and foot. The remains were skeletonized but with some greasy material still attached to the bones.

As established from anthropology examination, the person was a young man, aged between 15 and 20, and measuring from 170 to 186 cms in height. There were no particular identifying features.

There was evidence of a possible gunshot injury to the trunk, fracturing one of the bones of the spine, but there were no bullet fragments remaining and it was difficult to be definite about this. There was an almost certain gunshot injury however, to his left forearm, passing between both bones, and with a distorted bullet found close by.

There were no other injuries or significant findings, apart from evidence of burning of his clothing. On account of the doubts about the shot to the trunk, it is probably best to leave the cause of death, from this examination, as unascertained.

CAUSE OF DEATH:

It is my determination that the cause of death in case number **GL05 017B** was:
Unascertained

This formal report is based upon the autopsy report that I prepared at the time of my examination. Both reports truly and accurately reflect my findings.

Signed:.....

Dr John Clark MB ChB FRCPath Dip FM

Date: 13.10.99

A. GENERAL DESCRIPTION OF REMAINS:

Largely complete body, skeletonized but with pultaceous material adherent

B. CLOTHING:

- Back of a blue and white speckled crew-neck jersey showing extensive burning of edges
- Part of pair of grey underpants with burning of edges

OTHER ITEMS:

None

C. IDENTIFYING FEATURES:

Sex:

From examination of soft tissues: Not possible

From anthropology details: Male

Age range (from anthropology data): 15 - 20

Build: Not possible

Height (cm):

From estimation of intact body: Not possible

From anthropology data: 178.3 +/- 7.7

Hair:

Head hair: Not possible

Facial hair: Not possible

Teeth:

General description: Natural teeth in both jaws in good condition

Retained for dentist: No

Tattoos: Not possible

Scars: Not possible

Other features: None

D. BODY PARTS MISSING: See Anthropology Report

E. INJURIES:

i. Findings on fluoroscopy:

- Distorted bullet in bag with left hand bones

Radiographer: Patricia Campbell

ii. **Main injuries described:**

<u>Probably ante-mortem</u>	<u>Probably post mortem</u>	<u>Can't tell</u>
---------------------------------	---------------------------------	-----------------------

Trunk:

1. Possible gunshot injury to trunk, causing fracture of left lamina and transverse process of T11

√

Limbs:

2. Probable gunshot injury to left forearm, with small groove like defects on upper surface lower third of radius and on lateral border of lower third of ulna just below. From each of them radiate part thickness linear fractures. Probable bullet track between bones with forearm pronated.

√

F. INTERNAL TISSUES:

Brain

H. SAMPLES AND ITEMS RETAINED:**SOCO:** Ronnie Govender**Bullets/Shrapnel:**

- Distorted but largely complete sharp pointed copper jacketed bullet from bag containing left hand bones

Anthropology:

Right clavicle

Right 3rd rib**DNA:**

Right femur

Tooth

Other:

None
