AUTOPSY REPORT

GLOGOVA GRAVE SITE

CASE NO: GL05 160B

AUTOPSY DATE: 21.10.99
MORTUARY: Visoko

SUMMARY:

An almost complete body but missing the head and the right hand. There were additional hand bones from another person mixed in. The remains were skeletonized apart from the left foot where there was still some soft tissue attached.

As established from anthropology examination the person was a young man aged between 17 and 23, and measuring from 168 to 183 cms in height. There were no particular identifying features.

He died most probably from a gunshot injury to the chest, as suggested by extensive fracturing of three bones in the middle of the spine, albeit without any metal fragments remaining.

The only other injury was a fracture of the right forearm, but with the lower part of both bones missing, it was difficult to know what caused this or whether it occurred before or after death.

CAUSE OF DEATH:

It is my determination that the cause of death in case number **GL05 160B** was:
Gunshot injury to chest

This formal report is based upon the autopsy report that I prepared at the time of my examination. Both reports truly and accurately reflect my findings.

Signed:.....

Dr John Clark MB ChB FRCPath Dip FM

Date: 24.10.99

A. GENERAL DESCRIPTION OF REMAINS:

Largely complete body but minus the head. In clothing, but largely skeletonized with only muddy material adherent. Some tissue still on left foot.
